

PRIYANSHU SINHA

Data Science and Machine Learning Professional with 3+ Years' Experience

Seeking Full Time Data Scientist / ML Engineer Role

 +1-317-982-4563  priyanshu.sinha@outlook.com  [linkedin.com/in/pri2si17](https://www.linkedin.com/in/pri2si17)  github.com/pri2si17-1997

Education

Indiana University-Purdue University Indianapolis

Indianapolis, Indiana

Master of Science in Health Informatics

May 2023

Jaypee Institute of Information Technology

Noida, India

Bachelor of Technology in Computer Science and Engineering

May 2018

Experience

Labcorp Drug Development

Durham, North Carolina

Student Intern - Data Science

September 2022 - Present

- Working on clustering document based image forms and use it as pseudo labels for training a multi-class classifier.
- Created a tool to assess the deep neural network black box models explainability in order to comprehend the aspects influencing prediction and to meet stakeholder needs using Learning Interpretability Tool (LIT).

Labcorp Drug Development

Princeton, New Jersey

Data Science Intern

May 2022 - August 2022

- Performed time-series data analysis, created a deep LSTM network for weekly clinical screening rate forecasting, and examined the effect of COVID-19 on screening rate using TensorFlow and AWS Sagemaker.
- Developed a prototype for augmented annotation to categorize patient emails with a few samples using the BERT model and Hugging Face framework, which resulted in a 10x reduction in manual labeling work without noticeably affecting the model's performance.

Indiana University-Purdue University

Indianapolis, Indiana

Graduate Research Assistant

August 2021 - Present

- Working on Dementia/Alzheimer detection in early stage using image and text modalities. This can be used as screening tool for neuro-degenerative disease and provide better healthcare to patients.
- Developed a simulation tool to calculate departmental costs, faculty requirements, and student intake.
- Made a Virtual Reality teaching tool prototype in collaboration with Emory University researchers and surgeons to scale immersive learning during surgical procedures. By enabling VR annotations of surgical process scenes via a voice and hand controller, the prototype supports live interaction with students and doctors during procedures.
- Optimized deep learning imaging models to 8-bit integer precision quantization, achieving a 75% reduction in size, resulting in reduced memory consumption and 4x gain in inference speed for edge devices such as edge devices using TensorFlow Model Optimization Toolkit.
- Made tutorials for students and healthcare professionals to understand the application of machine learning and deep learning algorithms on healthcare data using MIMIC-IV dataset, Postgress database and TensorFlow.

Siemens Digital Industries Software

Noida, India

Senior Software Engineer

June 2018 - August 2021

- Created LoLa (Mentor's Proprietary Low Latency Framework) components to cluster Lidar's point cloud and project it on image for classification and detection using Python and C++.
- Created a semi-automated annotation tool to label data for autonomous cars, including classification, detection, and segmentation tasks of scenes leveraging deep learning models to generate pseudo-labels, reducing manual labeling efforts by 60%.
- Compared evaluation performance of SOTA object detection models like YOLO V3, RetinaNet with proprietary hierarchical classifier on KITTI and simulated data from Simcenter Prescan.
- Made web-based tool to scan for security vulnerabilities (CVEs) in packages, used in Linux based operating systems for automobiles, and checked if security patch is applied or not, reducing manual efforts by 75%.

Skills

Technologies : Machine Learning, Deep Learning, Data Structures and Algorithms, Computer Vision, Natural Language Processing, Time Series Analysis, Database Management System, REST APIs, Object Oriented Programming

Languages: Python, C++, C, R, JavaScript

Databases: SQL, MySQL, PostgreSQL, MongoDB

Libraries: Tensorflow, PyTorch, Keras, Numpy, Pandas, Scikit-Learn, Scipy, OpenCV, Matplotlib, Fastai, NLTK, Plotly, Dask, Flask, Django, Apache Spark, Simpy, Pytest, React

Operating System: Linux, Windows

Developer Tools: VS Code, Git, Docker, Jupyter Notebook, MATLAB(Basic), RStudio

Open-Source Contributions

Google Summer of Code (GSoC) Mentor @ LibreHealth | *Python, ML, Unity, VR* **May 2018 - Current**

- Mentored GSoC students to develop UI for Virtual-Reality application and integrate machine learning models for classification, detection, and segmentation of disease in a VR environment for immersive learning during medical procedures. This app includes features such as voice chat, live streaming and video playback.
- Mentored a GSoC student to migrate the LibreHealth EHR application from native PHP to Django for modular code and ease in test-driven development.

Awards and Achievements

- Our team (of 3 members) won **1st** place in the AT&T 5G Sports hackathon in Fan Engagement category (held in Indianapolis, USA) where more than 25 teams participated.
- Our team (of 2 members) was selected in **top-50** in Hackerearth IndiaHacks hackathon (2016) out of 1500 teams globally.

Projects

Explainable M5 Accuracy Forecasting | *Python, Tensorflow, Time Series* **December 2022**

- Created LSTM model to forecast 1 day and 28 day unit sales on M5 Forecasting - Accuracy dataset and explained the prediction of model using what-if-tool via counterfactual analysis.

Explainable AI in Radiology Image Analysis Pipeline | *Python, Tensorflow, Computer Vision* **December 2022**

- Created prototype for explainable AI in radiology image analysis using NIH-14 chest x-ray dataset. Densenet121 model is used to classify the disease and SHAP values are used to explain the prediction. The explainable AI will help radiologist comprehend the prediction and gain trust in black box AI.
